Re: Environmental Sustainability Data Analytics Intern, Spring 2027 (Req ID 10156341)

Dear Hiring Manager,

I'm a junior at Syracuse University studying Data Analytics with a minor in Computer Science, and I'm applying for the Environmental Sustainability Data Analytics Intern position.

I'm drawn to this role because it combines environmental data with a clear goal: helping guide Disney's progress on emissions, water, waste, and materials goals. As an Undergraduate Research Fellow at The SOURCE at Syracuse University, I've worked on a similar problem at a smaller scale. I clean and aggregate HVAC sensor data using Python and pandas, and I built a three-condition flagging system that identified a 2.4x performance gap between two units that looked comparable on paper. That kind of work, taking raw environmental data and turning it into something a team can act on, is what I'd want to keep doing here.

I also have experience with SQL and Power BI, alongside my Python work, so I'd be ready to apply those tools to Disney's environmental data from day one.

I'm familiar with Disney Planet Possible and the way it frames sustainability as something the company puts into practice across its parks and operations, not just a stated goal. At SOURCE, part of my role has been turning research findings into reports and presentations that translate data into recommendations, which is close to what this position calls "storytelling with data." I'd welcome the chance to apply that same skill to a program with this level of visibility.

I'm comfortable with hands-on environments, and I'm ready to take that same approach to whatever this role requires.

I'd welcome the chance to discuss the role further. Thank you for considering my application.

Sincerely,

Diamone Cromer
