Wonder

New York, NY

Re: Process and Data Analysis Engineer Intern (JR101325)

Dear Wonder Hiring Team,

I'm a junior at Syracuse University studying Data Analytics, with minors in Architecture and Computer Science. I split my time between code and physical builds, which is exactly the mix your Construction and Design team needs for this role.

As a research fellow at The SOURCE, I cleaned messy sensor data in Python and pandas, aggregating 5-minute HVAC readings into 30-minute intervals so the data was actually usable. I built a three-condition flagging system that caught a 2.4x performance gap between two units that looked fine on paper, which taught me that the interesting problems in data work usually hide in details most people skip. I also visited the building I was researching, so I'm used to connecting the numbers on a screen to the physical system producing them, not just treating sensor data as an abstract spreadsheet.

My architecture minor adds to that. I've built models by hand and used Rhino and SketchUp for studio projects, so I'm comfortable with work that extends past a laptop, whether that means being on-site, reading a floor plan, or understanding how a physical space actually functions.

I haven't built dashboards professionally, but I've made data visualizations from raw sensor data in my research, and I pick up new tools quickly. I'd be glad to learn Sheets or whatever your team uses, and I'd rather spend my first weeks figuring out your systems than waiting to be handed easy work.

Wonder stood out to me because it's a small team doing hands-on work at a growing food-tech company, not a typical office internship. I want to finish something real by the end of the summer, not just observe.

I'd love to discuss the role further. Thanks for considering my application.

Sincerely,

Diamone Cromer
