Re: University Intern - Digital Advisory (Req HON0003JM)

Dear Hiring Team,

I'm a junior at Syracuse University studying Data Analytics, with minors in Architecture and Computer Science. I understand both sides of a building: the data behind it and the physical structure itself, which is exactly the intersection your Digital Advisory team works in.

At The SOURCE, I cleaned and aggregated HVAC sensor data using Python and pandas, and I built a three-condition flagging system that caught a 2.4x performance gap between two units that looked comparable on paper.

My architecture minor adds the other half. I've built physical models by hand and used Rhino and SketchUp in studio projects, so I know how a building works beyond what a dataset can show.

What drew me to Arup specifically is Total Design. Most firms keep data and design as separate disciplines, but Arup's projects treat them as informing each other, which matches how I already think about my own work.

Arup is also employee-owned and independently minded, which stood out to me. That structure suggests a firm that can commit to long-term goals, like the UN Sustainable Development Goals you mention, instead of decisions driven by short-term shareholder pressure. That's part of why I'd rather spend my internship here than at a traditional consultancy.

I'd welcome the chance to bring my research background to a team working at this intersection. Thank you for considering my application.

Sincerely,

Diamone Cromer
